Thank you note	1
Organisational Guidelines	3
Chairman's Message	4
Programme Outline - Timetable	5
Conference Programme	6
 OPENING SESSION	
Research on Solar Air-Conditioning: German Federal Funding Strategies Kerstin Krüger, Projektträger Jülich GmbH, Jülich, Germany	16
Exploitation in an unfair world: finding attractive markets for solar cooling Stephen White, CSIRO Energy Technology, Newcastle, Australia	19
Solar cooling with IEA SHC Task 48: overview and first results Daniel Mugnier, Tecsol SA., Perpignan Cedex, France	25
Development of solar cooling technologies in Shanghai Jiao Tong university Yanjun Dai , Shanghai Jiao Tong University, Shanghai, China	31
The influence of system design on energy and economic performance of solar cooling systems in office buildings worldwide Ursula Eicker, zafh.net, University of Applied Sciences, Stuttgart, Germany	37
 POSTER SESSION	
Solar cooling in a hardware-in-the-loop test and pilot plant Sandra Lohmann, Düsseldorf University of Applied Sciences E ² - Renewable energy and energy efficiency, Düsseldorf, Germany	44
Energy performance of a novel membrane liquid desiccant air conditioning system for an office building in hot-humid climate Ahmed Abdel-Salam, University of Saskatchewan, Saskatoon, Canada	50
Development of a small-sized air-cooled absorption chiller for solar air-conditioning using the mixture h₂o/libr+lino₃+lii+licl Maider Epelde, Tecnalia, Azpeitia, Spain	56

Table of Contents

Performance of absorption chillers assisted by solar thermal energy Eiji Hihara, The University of Tokyo Graduate School of Frontier Sciences, Kashiwa, Japan	62
A study on combined ejector-vapor compression refrigeration cycle assisted by solar thermal energy Akihiko Shimizu, The University of Tokyo Graduate School of Frontier Sciences, Kashiwa, Japan	68
Complete characterisation in a test bench of small capacity absorption chillers Joaquin Rodríguez-Carabias, Universitat Rovira i Virgili CREVER, Tarragona, Spain	74
Solar hybrid desiccant heat pump systems Takehiro Koyano, The University of Tokyo Graduate School of Frontier Sciences, Kashiwa, Japan	80
Studies on modified gas based solar operated absorption heat pump cooler for building heating and cooling applications Alberto Coronas, Universitat Rovira i Virgili, Tarragona, Spain	86
First results of a directly air-cooled water/LiBr absorption chiller Mathias Safarik, Institut für Luft- u. Kältetechnik gemeinnützige Gesellschaft mbH, Dresden, Germany	92
Energy performance of heat pump systems coupled with hybrid pv/t exploiting night radiative cooling for the production of cooling energy Roberto Bruno, University of Calabria, Arcavacata di Rende (CS), Italy	98
Monitoring results of a solar cooling and heating system installed in a small office building Patrick Frey, Institute for Thermodynamics and Thermal Engineering, University Stuttgart, Stuttgart, Germany	104
A solar thermal cooling plant in Athens – Experimental results and lessons learned Panagiotis Tsekouras, CRES, Athens, Greece	110
A concentrating - based solar cooling system for agri-food industry Andrea Frazzica, CNR-ITAE, Messina, Italy	116
Technical potential of a new compact air-cooled small scale absorption solar cooling plant Ahmed Yahia, Politecnico Di Milano, Milano, Italy	122

Table of Contents

Solar-assisted trigeneration: primary energy efficiency and cost performance of a new system concept	128
Michael Becker, Technische Universität München University of Applied Sciences Kempten, Kempten, Germany	
Development and validation of solar cooling and solar cooling combined with free cooling simulation models	134
Paul Gantenbein, HSR University of Applied Sciences, Rapperswil, Switzerland	
A non-linear absorption chiller model with internal control algorithm	140
Inga Doemland, Australian National University (ANU), Canberra, ACT, Australia	
Design of a 100 kw solar single/double effect absorption air conditioning system driven by fresnel solar collector with thermal storage	146
Yao Zhao, Shanghai, China	
A solar cooling and heating system powered by a linear Fresnel collector for an office building in Germany	152
Christian Zahler, Industrial Solar GmbH, Freiburg, Germany	
Dynamic power control of a small capacity chiller, modelling and first results	157
Daniel Neyer, University of Innsbruck, Innsbruck, Austria	
Simulation-based procedure for the optimization of the control strategy of a shc system	163
Chiara Dipasquale, Eurac - Research, Bolzano, Italy	
Development of an experimental device for thermodynamic evaluation of sorption refrigeration cycles	169
Cesar A. Isaza, Universidad Pontificia Bolivariana, Medellín, Colombia	
A generic adsorption heat pump model for system simulations in TRNSYS	170
Christian Glueck, Karlsruhe Institute of Technology, Karlsruhe, Germany	
Global applicability of solar DEC-systems: basic technology effectiveness in climatically different regions	176
Tobias Bader, Hochschule Ingolstadt, Ingolstadt	

Table of Contents

Components Part 1

Testing of a desiccant wheel with internal heat exchange Mark Goldsworthy, Commonwealth Scientific and Industrial Research Organisation, Newcastle, Australia	184
SCRIB, a new concept for large solar heating and cooling systems Charles Daniel, Helioclim, Mandelieu, France	190
A concept for a "thermally driven" solution pump suitable for ammonia/water absorption heat pumping systems Gerald Zotter, University of Technology Graz, Graz, Austria	196
Development of a Sorption Assisted Air Conditioning System Driven by a Solar Air Collector Gunther M. Munz, Fraunhofer ISE, Freiburg, Germany	202

Components Part 2

Experimental investigation of adsorption performances of an heat exchanger packed with silica gel for application in solar desiccant cooling systems Pietro Finocchiaro, University of Palermo, Palermo, Italy	210
Development and demonstration of a 50 kW double-effect absorption chiller in combination with a novel parabolic trough collector Mathias Safarik, Institut für Luft- u. Kältetechnik gemeinnützige Gesellschaft mbH, Dresden, Germany	216

Industry Forum

Ammonia-Water absorption chiller technology by ILK Mathias Safarik, ILK Dresden, Germany	224
Industrial Solar – thermal solutions Christian Zahler, Industrial Solar, Freiburg, Germany	227

System Design: Design Tools, Simulation, Engineering Part 1

Simulation and analysis of a hybrid air conditioning system Khaled Gommed, Technion - Israel Institute of Technology, Haifa, Israel	232
---	------------

Table of Contents

Comparison of hybrid ejector/vapour compression configurations for solar cooling applications	238
Mike Dennis, The Australian National University, Canberra, Australia	
Steady-state modelling of absorption chillers through parameter estimation and data reconciliation	244
David Martínez-Maradiaga, Universitat Rovira i Virgili, Tarragona, Spain	
Design facilitator: simplified design tools for solar heating and cooling systems	250
Amandine Le Denn, Tecsol SA., Perpignan Cedex, France	
The potential of solar adsorption air-conditioning in Saudi Arabia: a simulation study	256
Ahmed Al-Mogbel, King Abdulaziz City for Science and Technology, Riyadh, Saudi Arabia	
System Design: Design Tools, Simulation, Engineering Part 2	
Conceptual design study of solar cooling systems for India	264
Michael Joemann, Fraunhofer UMSICHT, Oberhausen, Germany	
Advanced controls of solar driven adsorption chillers	270
Antoine Dalibard, zafh.net, Stuttgart, Germany	
Photovoltaic driven Solar Air Conditioning Systems	
Energy and economic performance of photovoltaic compression cooling systems	278
Dirk Pietruschka, zafh.net, University of Applied Sciences, Stuttgart, Germany	
Aspects on solar thermally driven heating and cooling and PV supported energy supply in buildings	284
Edo Wiemken, Fraunhofer-Institut für Solare Energiesysteme ISE, Freiburg, Germany	
Thermal and economic analysis of two different sahp systems for annual air-conditioning of a building	290
Roberto Bruno, University of Calabria, Arcavacata di Rende (CS), Italy	

Table of Contents

Operation and energy efficiency of a hybrid air conditioner imultaneously connected to the grid and to photovoltaic panels Pedro V. Quiles, Universidad Miguel Hernández, Elche, Spain	296
Solar Cooling Applications	
Solar cooling with adsorption chiller aggregates - Recommendations from practice to avoid mistakes in system design and operation André Weiß, SorTech AG, Halle (Saale), Germany	304
Development of improved desiccant evaporative cooling control system for full year operation including greenhouse buffer plants Anita Preisler, Austrian Institute of Technology, Wien, Austria	305
A demonstration plant of a liquid desiccant air conditioning unit for drying applications Ulrike Jordan, University of Kassel, Kassel, Germany	311
Practical Experience: Operation, Maintenance, Energy Performance, Cost Performance	
Modeling and experimental verification of a liquid desiccant cooling system in Athens Ioannou Christodoulaki, National Technical University of Athens NTUA, Athens, Greece	318
Practical experience and simulation of a large solar thermal driven cooling plant in Singapore Daniel Neyer, University of Innsbruck, Innsbruck, Austria	319
Performance figures for the analysis of heat rejection systems Björn Nienborg, Fraunhofer ISE, Freiburg, Germany	325
Comparison of a similar control strategy for ab- and adsorption chillers Jan Albers, TU Berlin Inst. für Energietechnik, Berlin, Germany	331
Results and evaluation of the prototype operation of an open sorption based air-conditioning system under tropical climatic conditions in Singapore Alexander Morgenstern, Fraunhofer-Institut für Solare Energiesysteme ISE, Freiburg, Germany	337

Table of Contents

List of Exhibitors	343
List of Posters	344
List of Speakers	348
List of Authors	352
For your notes	358
